

# Got Bags?

## Bag your bags

### What?

Did you know that plastic grocery bags and all kinds of plastic film are recyclable?

**Why?** Unrecycled plastic bags can take more than 30 years to biodegrade in a landfill and cause a large amount of plastic pollution when distributed in our natural environment by the wind .

**How?** How easy is this? Just bag all of your bags and film in one bag, tie the bag at the top and toss them in your mixed recycling cart.

## Kick the Bag

### What?

Get on board and challenge yourself to eliminate your consumption of single-use bags for the summer.

**Why?** Single use plastic AND paper bags are not sustainable! They use up and waste our natural resources and plastics create pollution that some are calling the “Plastic Plague.”

**How?** Reusable bags are EVERYWHERE. Dig one out of a drawer or pick one up at your favorite retail store in Gonzales. We love the ones that roll up and fit in a car glove compartment or a handbag.
